

Application No. 10/606,104
Amendment "A" dated March 15, 2005
Reply to Office Action mailed December 17, 2004

AMENDMENTS TO THE CLAIMS

The listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A vertical cavity surface emitting laser comprising:
a substrate;
a first mirror situated on said substrate;
an active region situated on said first mirror;
a second mirror situated on said active region;
a first electrical contact situated on said first mirror; and
wherein:
said first mirror comprises a plurality of pairs of layers; and
one layer of at least one pair of the plurality of pairs of layers is an oxidized layer, wherein said one layer has an aluminum content of less than 60% before being oxidized.
2. (Original) The laser of claim 1, wherein said substrate comprises InP.
3. (Original) The laser of claim 2, wherein the oxidized layer comprises at least one of a group comprising oxidized InAlAs, InAlGaAs, AlAsSb, AlGaAsSb, AlGaPSb and AlPSb.
4. (Original) The laser of claim 3, wherein one layer of at least one pair of the plurality of pairs of layers comprises InP.

Application No. 10/606,104
Amendment "A" dated March 15, 2005
Reply to Office Action mailed December 17, 2004

5. (Original) The laser of claim 4, wherein:
said second mirror comprises a plurality of pairs of layers; and
one layer of at least one pair of the plurality of pairs of layers of said second mirror comprises InP.

6. (Original) The laser of claim 5, wherein one layer of at least one pair of the plurality of pairs of layers of said second mirror comprises InGaAsP.

7. (Original) The laser of claim 5, wherein one layer of at least one pair of the plurality of pairs of layers of said second mirror comprise one of a group comprising InGaAsP, InAlAs, InAlGaAs, AlAsSb, AlGaAsSb, AlGaPSb and AlPSb.

Application No. 10/606,104
Amendment "A" dated March 15, 2005
Reply to Office Action mailed December 17, 2004

8. (Currently Amended) A vertical cavity surface emitting laser comprising:
a first mirror having a plurality of layers including at least one pair of layers having an InP layer and an oxidized layer;
a cavity proximate to said first mirror; and
a second mirror proximate to said cavity; and
~~wherein:~~
~~said first mirror comprises a plurality of layers; and~~
~~the plurality of layers comprises at least one pair of layers having an InP layer and an oxidized layer.~~

9. (Original) The laser of claim 8, wherein said first mirror is proximate to an InP substrate.

10. (Currently Amended) The laser of claim 9, wherein an output of the laser ~~may have~~ has a wavelength greater than 1200 nm.

11. (Original) The laser of claim 10, wherein said second mirror comprises a plurality of layers having at least one InP layer.

12. (Original) The laser of claim 11, wherein said cavity has at least one quantum well.

13. (Original) The laser of claim 12, wherein said second mirror comprises a partially oxidized layer for confining current.

14. (Original) The laser of claim 13, further comprising:
a first electrical contact on said second mirror; and
a second electrical contact on the substrate.

Application No. 10/606,104
Amendment "A" dated March 15, 2005
Reply to Office Action mailed December 17, 2004

15. (Original) The laser of claim 13, further comprising:
an intra-cavity contact layer situated between said first mirror and said cavity;
a first contact on said second mirror; and
a second contact on said intra-cavity contact layer.

Application No. 10/606,104
Amendment "A" dated March 15, 2005
Reply to Office Action mailed December 17, 2004

16. (Currently Amended) A vertical cavity surface emitting laser comprising:
a substrate comprising InP;
a first stack of layers formed on said substrate, the first stack of layers including one or more layers of InP;
a quantum well region formed on said first stack of layers;
a second stack of layers formed on said quantum well region;
wherein approximately every other layer of said first stack of layers is at least partially oxidized.
17. (Original) The laser of claim 16, wherein approximately every other layer of said first stack of layers comprises InP.
18. (Original) The laser of claim 17, wherein each layer of said first and second stacks of layers has a thickness of approximately one-fourth of an optical wavelength between 1200 nm and 1800 nm.
19. (Original) The laser of claim 18, wherein the every other layer that is at least partially oxidized of said first stack of layers is formed from a material of a group comprising InGaAsP, InAlAs, InAlGaAs, AlAsSb, AlGaAsSb, AlGaPSb and AlPSb.
20. (Original) The laser of claim 19, wherein approximately every other layer of said second stack of layers comprises InP.
21. (Original) The laser of claim 20, wherein said first and second stacks of layers are distributed Bragg reflectors.
22. (Original) The laser of claim 21, wherein said second mirror comprises a partially oxidized layer for confining current.

Application No. 10/606,104
Amendment "A" dated March 15, 2005
Reply to Office Action mailed December 17, 2004

23. (Currently Amended) A method for making a vertical cavity surface emitting laser, comprising:

forming a first stack of layers on a substrate, wherein one or more of the layers in the first stack of layers are InP layers;

forming a quantum well region on the first stack of layers;

forming a second stack of layers on the quantum well region;

forming at least one trench through the second stack of layers, the quantum well region and the first stack of layers nearly up to the substrate; and

oxidizing some layers of the first stack of layers via the at least one trench.

24. (Original) The method of claim 23, wherein the substrate comprises InP.

25. (Original) The method of claim 24, wherein some layers of the first stack of layers comprise InP.

26. (Original) The method of claim 25, wherein some layers of the first stack of layers comprise a material from a group comprising InAlAs, InAlGaAs, AlAsSb, AlGaAsSb, AlGaPSb and AlPSb.

27. (Original) The method of claim 26, wherein some of the layers of the second stack of layers comprise InP.

28. (Original) The method of claim 27, wherein the thickness of each layer of the first and second stacks of layers is approximately one-fourth of an optical wavelength ranging from about 1200 nm through 1800 nm.

29. (Original) The method of claim 28, wherein:
the first stack of layers comprises a plurality of pairs of layers; and
at least one pair of the plurality of pairs of layers has an oxidized layer and an InP layer.

Application No. 10/606,104
Amendment "A" dated March 15, 2005
Reply to Office Action mailed December 17, 2004

30. (Original) The method of claim 29, oxidizing a layer in the second stack of layers for confining current in the laser.

Application No. 10/606,104
Amendment "A" dated March 15, 2005
Reply to Office Action mailed December 17, 2004

31. (New) A vertical cavity surface emitting laser comprising:
a first mirror having six or less pairs of layers, wherein one layer of each pair of layers is an oxidized layer;
a cavity proximate to said first mirror; and
a second mirror proximate to said cavity.
32. (New) A laser of claim 31, wherein each oxidized layer in each pair of layers has less than 60 percent aluminum before being oxidized.
33. (New) A laser of claim 31, wherein a second layer in each pair of layers is InP.
34. (New) A laser of claim 31, wherein the each oxidized layer is formed from a material of a group comprising InGaAsP, InAlAs, InAlGaAs, AlAsSb, AlGaAsSb, AlGaPSb and AlPSb.
35. (New) A laser of claim 1, wherein the plurality of pairs of layers comprises at least six pairs of layers.
36. (New) A laser of claim 8, wherein the plurality of layers of the first mirror comprises at least six pairs of layers.
